# Can Arena be installed on Windows Vista?

Arena is not currently supported on Windows **Vista**.

However, you may be able to install Arena on **Vista** with the following:

Copy the CD image to your hard drive,
Run setup.exe from the install directory of the CD image.  You may receive the following error messages:
- 'An unidentified program wants access to your computer'. Select 'Allow'
- 'This program might not have installed correctly' ,  select 'Reinstall using recommended settings'.
- 'An unidentified program wants access to your computer'.   select 'Allow'
It then checks for the required programs (e.g. MDAC, etc.) and installs Arena.

Right click on the Arena icon and select Run as Administrator to run Arena.
